**Superior Foundation Services, LLC**  
299 South Perkins Street  
Ridgeland, MS 39157

To Whom it May Concern:

Superior Foundation Services, LLC provides the highest quality products and superior customer service for foundation repair, new foundation piers, and french drain/storm water management for residential and commercial buildings throughout all Mississippi. I have known Todd and Trey for many years and truly respect their character, work ethic, and dependability as reputable business owners who are very competent in their field of residential foundation repair/construction. Working as a Professional Engineer in the State of Mississippi and Louisiana, I have collaborated with Superior Foundation Services on multiple foundation repair jobs, as well as new foundation piers. For residential foundation repair and/or new foundation construction, the DynaPier® system is a very unique sectional pier that consist of cylindrical, steel-encased high-strength concrete segments. Not only does it provide high compressive strength, but it also provides high shear strength to resist the lateral loads present in shifting dynamic soil conditions. Another advantage from a structural stability perspective is the fact that the DynaPier® is concentrically loaded. This ensures that the pier acts in uni-axial compression to fulfill the maximum capacity available from the steel encased concrete cylinder and eliminates the concern of eccentrically loading the pier and causing the cylinder to fail in flexural buckling.

Superior Foundation Services is now offering helical piles for new foundation construction. This technique offers even more flexibility into their service regime and serves as preventative maintenance for residential construction. Helical piles have the potential to offer even greater capacities with larger spacings due to the large diameter helix at the end of the steel shaft.

Superior Foundation Services have a proven track record of providing their clients with the best quality products available. They also offer the flexibility to offer a product that meets the requirements of the particular job, whether they are repairing the foundation, drilling new construction piers, or providing storm water management solutions. I highly recommend the services of this organization when it comes to residential construction solutions.
